Angelus Britannicus:

AN

EPHEMERIS

For the Year of our Redemption 1671.

Being the Third after the Biſſextile or Leap-year. And from the Creation of the World 5620.

Amplified with

Aſtrological Obſervations from the Suns Ingreſs into *Aries* and the other Cardinal Points; with an account of the Eclipſes, Conjunctions, and other Configurations of the Heavenly Bodies.

With ſome Brief Obſervations of the firſt Oppoſition of *Saturn* and *Jupiter*.

Calculated for the Meridian of LONDON, where the Pole Artick is elevated above the Horizon 51 Degrees, and 32 Minutes; but may indifferently ſerve for ENGLAND, SCOTLAND, and IRELAND.

By John Tanner, *Student in Aſtrology and Phyſick.*

Agunt non Cogunt:

Aſtra in Voluntatem hominis, & liberum arbitrium indirectè, & per accidens agunt; dum directè temperamentum ſignificant & diſponunt, ſinſuſque in conſenſum trahunt.

LONDON,

Printed by *Thomas Ratcliffe* and *Mary Daniel* for the Company of Stationers. 1671.

According to the
Julian, English, Old Account. } Gregorian, Foreign, New Account.

January hath xxxi dayes.

Month dayes.	Week dayes.	
		My modeſt Muſe lift up thy penſive eye,
		and ſee what's brewing in the angry Sky:
		See dogged Chronos ſwell with enmitie,
		'Gainſt milder Jove, tells what th' effects will be;
		And though thou haſt not skill to rant or ſing,
		Pray and be Loyal to thy Lord and King.

Month dayes.

This moneth in amity the Stars do seem,
And Peace th' effects will be, perhaps you deem:
I rather fear (whilst silent) they conspire,
As evil men plot mischief by the fire
The weather seems serene, frosty, and fair,
But Sol and Jove sometimes disturbs the air.

	Lunations and other Observations.	Aspects &c.

February hath xxviii dayes.

Crooked old Saturn *courts the Queen o'th' Skyes,*
And vails the Heavens to hide her watering eyes:
The King of Stars doth hast to Saturn *too,*
And saith that nought but Justice he shall do.
So fair pretence, and seeming honesty,
Doth sometimes shroud the greatest treacher.

Month days.

You may expect whilst these Stars are together,
The Heavens open, and great fall of weather;
Which maketh February *fill the Dyke*
With black, or rather white, which we most like.
But at the end Jove's *Trine to* Mercury,
Sends gales of wind, and they soon clear the sky.

Month dayes.

The friendly Stars complying, loving Trine
Mod'rates the air, and makes Sol lustre shine;
But Saturn's cloudy rayes to th' Horoscope,
Doth (for a season) seem to dash our hope:
But Sol and Jove in Trine do clear the air,
We hope the weather will prove dry and fair.

As the beginning Saturns *lowring eye*
Spreadeth thick Clouds, which dark the azure Skie;
But Mercury *doth clear the Air again,*
Yet crabbed Mars *affords us storms and rain:*
But afterwards the fortunes meet together,
Hence follows wholesom pleasant Summer weather.

July hath xxxi days.

Sol smiles on Saturn with his cloudy brow,
Venus enraged, vows she will not bow:
Hermes vales Bonest, suddenly withdraws,
The Heaven's in silence, Stars are at a pause:
After a silence all men out of hand
Expect an information or Command.

The month beginneth with a cloudy skie,
But they are countermanded by and by;
And Farmers fearless make their Hay again,
Till th' lowest two threat sudden showres of rain:
Saturn and Venus for some days together
Send rain, yet afterwards good harvest weather.

Month Days.	Lunations and other observations	Aspects & weather.

Silence is past, Sol and the god of Battel
Kindles a heat makes Heaven and Earth to rattle,
Leaves him, and Jove assaults, and makes him feel
Th' effects of's anger, and force of his Steel:
Then treacherous Saturn doth oppose the Sun,
And slily acts what force could not have done.

October hath xxxi days.

The highest two each other do oppose,
Th' Effects we must expect; Wise men suppose
That 'tis the Prodromus of ill effects,
Since it is prov'd the worst of all aspects:
Strifes and contentions, and the worst of things
Amongst great men inferiour unto Kings.

Their influence doth discompose mens minds,
And in the Air raise strong impetuous Winds,
Rain to excess, Obnoxious to the season,
To fear some scarcity we have good reason;
Those under Pisces *will these evils see,*
But we escape, happy, thrice happy we.

Those places under Virgo *and* Sagittary
Are by the Heavens advised to be wary:
Let double-bodied Gemini *beware,*
And not expose it self for want of care;
For sure it is, such grand configurations
Presage no small, but eminent mutations.

Saturn and Mars shake hands and well agree,
The Heavens this month do smile, wish so may we;
And that the Sun and Jove may joy your Feasts,
To mercy incline, to make the poor you Guests:
May Grace and Virtue flourish, Vice decay,
Then God his angry Rod will take away.

16	1 4	39	2 36	80	5 20	300	20 0
17	1 8	40	2 40	90	6 0	310	20 40
18	1 12	41	2 44	100	6 40	320	21 20
19	1 16	42	2 48	110	7 20	330	22 0
20	1 20	43	2 52	120	8 0	340	22 40
21	1 24	44	2 56	130	8 40	350	23 20
22	1 28	45	3 0	140	9 20	360	24 0
23	1 32	46	3 4				

With your Degrees enter the Table in the Columns marked with D. *Having found your Degrees, the Number that answereth to your degrees in the Column marked with* H. m. *is the Hours and minutes answering to those Degrees: if you find not your Number entire, enter twice the Table. Degrees give Hours and Minutes, Minutes give Minutes and Seconds,* &c.

ASTROLOGICAL OBSERVATIONS

For the Year, 1671.

Cœlum ad nos ſpectat, Cœlum ſpectemus oportet,
Nam Deus Aſtra dedit Cœlo, oculoſque tibi:
Vim tibi pars terræ, Terræ millena videtur:
Cœlum dimidiâ cernere parte licet.
Cur igitur cœlo Terram, ſtultiſſimè, præfers?
Ut nos eſt, matrem plus patre forſan amas.

God made the Heavens for man, and gave man eyes
To view the Stars he placed in the Skies.
O'th Earth the thouſandth part doth not appear:
Of Heaven, each man beholds the Hemiſphere;
Why ſhould fond man ſlight Heaven, chuſe Earth rather?
The Child oft loves his Mother more than's Fither.

TO know the time of high water at *London* bridge, or elſe where upon the eighth day of *February* this year, I firſt count how many dayes old the Moon is from the day of her laſt change; I find ſhe changed on the thirtieth of *January* laſt, and is nine dayes old upon the eighth of *February*. I have recourſe to the firſt Table, and find the point of the Compaſs anſwering to *London* is five

I next look for this number five in the head of the other Table, among the great figures, and nine the Moons age in the first column, entituled the *Moons age*, and in the common angle, or meeting place, I find ten hours, twelve minutes, which is the time of high water at *London*-bridge, at *Yarmouth*, *Dover*, &c. whose point of the compass is fifteen, it is full sea at forty two minutes past five. At *Plymouth*, *Weymouth*, *Hull*, *Lyn*, &c. whose point is nine, it is full sea at twelve minutes past one. So you may easily gain the time of high water at any time or place mentioned in the Table, as exactly as may be by any general rule; but if the latitude of the moon were duly considered, it would be more exactly found. Also the Winds and Land-floods do cause the Tides sometimes to vary from the time found in this Table.

For illustration of the five Tables after the Ephemeris or Almanack, I shall erect a Celestial Scheme, or figure of Heaven, for the time of the new moon on the two and twentieth of *October* preceding the opposition of *Saturn* and *Jupiter*, it happeneth at four hours fifty nine minutes after noon. By the first Table I convert these hours and minutes into time, and they give 74 d. 45 m. The Suns place is 9 d. 15 min. ♏.

	217	00
I find his right ascension in the second Table, add the minutes being above 30. I take a degree	291	45

The oppoſite Houſes have the oppoſite ſigns.

♋	4	20	degr.	♌	5	7	degr.	♍	6	13	degr.
♎	7	16	degr.	♐	8	21	degr.	♑	9	7	degr.

Of which figure I ſhall take notice hereafter in its proper place, when we come to the Autumnal Quarter. This oppoſition of the Superiours certainly will be attended with great and eminent effects; and ſeeing it is impoſſible to know the time ſo exact as to erect a figure of Heaven, I have made choice of the figure of the New moon preceding. This difficulty ariſeth from the tardity of their motions: but I ſhall ſay no more here, but come to conſider of the Vernal Æquinox.

Of the Spring.

THe Spring or Vernal Quarter took its name *a viven-do, quia tunc omnia virent & florent*, becauſe all things then grow green and flouriſh. And it Aſtronomically takes its beginning, when the glorious Lamp of Heaven, the Sun, entereth the firſt ſcruple of *Aries*, equalizing the dayes and nights, to all the habitable part of the world. This happeneth this year on *Friday* the tenth of *March*, near eleven in the forenoon: At which time the poſi-

tion of the Heavens reſpect the Earth, as in the following Figure.

Pro quarta anni obſerva introitum ſolis in Æquinoctialia vel ſolſtitialia puncta, item præcedentes Luminationes; & angulos cæli in horâ illâ, item Dominos locorum conjunctionis vel oppoſitionis, & angulorum, & ſecundum vires ſtellarum dominantium in illâ judica qualitatem aeris. For the Quarters of the year obſerve the ingreſs of the Sun into the Æquinoctial or Solſtitial points, and the preceding lunations and angles of Heaven at that time, alſo the Lords of the places

places of the Conjunction or Oppoſition, and the angles thereof, and according to the ſtrength of the Stars that have dominion therein, give judgment of the conſtitution of the Air. According to this preſcription *Jupiter* far excelleth all the reſt in dignities in the aforenamed places of the Figure of this Ingreſs, and of the preceding and poſtuentional Lunations. The *Moon* is applying to him located in the ſecond houſe in the Celeſtial Lyon, which preſageth a temperate ſeaſon, and good air both pleaſant and ſerene. But it is to be conſidered, that he is unfortunately placed out of all his eſſential dignities, and retrogradate; for ſly ſubtil *Saturn* is got into *Jupiter* his houſe, and claims his dignities and prerogatives, and before the year doth end, doth oppoſe him, whilſt he is debilitated in his detriment.

Guido Bonatus ſaith, part 4. cap. 75 p. 561, 562. *Si fuerit Saturnus in Piſcibus fueritque latitudo ejus meridiana, ſignificat tempeſtatem in mari, & illa de cauſa fractionem navium; & quòd venient impedimenta his qui morantur in aquis, & qui operantur in ipſis. Et ſi fuerit orientalis ſignificat rixas, & contrarietates divitum, & inter eos mutuas interſectiones.* If *Saturn* be in the Fiſhes, and have South latitude, it ſignifieth tempeſtuous weather upon the Sea, occaſioning ſhipwrack: and that the people that live near the Seas, and thoſe whoſe buſineſs is upon the Seas ſhall receive much prejudice and impediment. If he be oriental, he ſignifieth quarrellings and diviſions of rich men, and ſlaughters to enſue. *Albumazar* ſaith, *Si fuerit directus ſignificat populares domorum religionum & divinæ culturæ.* If he be direct, he ſignifieth the promoting or ſetting up of Religious Houſes, and Houſes of divine worſhip. I ſhall take no farther notice of his ſignification here, but leave it till we come to his oppoſition with *Jupiter*, only thus, that did not the Moons application to *Jupiter*, and the Sun ſoon after to his Trine all in dry Manſions, ſeem to incline the air to ſiccity, otherwiſe *Saturns* culminating, and ejaculating his Trine to the aſcending

point, would produce the contrary effect; hence we may conjecture that the weather will be temperate, neither too dry nor wet.

Summer Quarter.

THe Summer Quarter commenceth with the Suns entrance into the firſt ſcruple of the Tropick of *Cancer*, making the longeſt day and ſhorteſt night. It is called Summer from the German word left to us by the Saxons, *Sun Mehr*, or *plus Solis*, becauſe we have then more of the Sun than at other times. This happeneth this year on Sunday the eleventh of *June*, being Whitſunday, at thirty eight minutes paſt one afternoon. The Heavens preſent themſelves thus, ſeventeen degrees and fourteen minutes of the Ballance upon the Horoſcope, and twenty two degrees and forty minutes of the Crab occupieth the mid-heaven, according to the majority of teſtimonies of fortitude; in the principal places of the figures, *Venus* claims the preheminence, with whom *Mercury* and the *Moon* claims a ſhare. *Venus* is located in the mid-heaven going to *Jupiter*: *Mercury* in the ninth in Trine to *Saturn*, who is under the earth; and ſo is the *Moon* in Quartile aſpect to him alſo. *Venus* her poſition near *Jupiter*, and his Trine to the Aſcendant, with the riſing of the *Virgins Spike*, preſageth a fair, temperate and ſerene ſeaſon. The *Moon* and *Mercury*'s application to *Saturn* in a moiſt Sign, give their teſtimonies for moiſture and clouds. Hence we expect a moderate ſeaſon, profitable and refreſhing ſhowers, moſt of this Quarter. But in *Auguſt* theſe following configurations, ♂ ☉ ♂ ♂ ☉ ♄, ♂ ♄ ♂, ♂ ☉ ♄, afford plenty of Thunder, Lightning and a turbulent air, with great ſhowers of Rain,

Of

Of the Autumn Quarter.

IT is called Autumn from *Augeo, quia tunc fruges augentur*, because then the fruits of the earth come to perfection. It takes its beginning when the Sun enters *Libra* or the Ballance, producing the second Æquinox to all on this side of the polar Circles. It takes its beginning this year on Wednesday the thirteenth of *September*, at forty eight minutes past four in the morning. The thirteenth degree and twenty four minutes of *Gemini*, or the Twins, upon the mid heaven, and seventeen degrees and nineteen minutes of the Virgin ascending. *Mercury* and *Venus* by their dignities in the Helejiacal places, plead for the right of dominion, or rule of this Quarter. But the Superiours occupying the principal Points and Angles of Heaven, seem to be more considerable; considering how they stand related now to the late Conjunction 1663. to the great Conjunction it self, and the near approach of their first Opposition. The very opposite Point of the last Conjunction is the Cusp of the mid heaven in this revolutional figure; and the place which the Superiours beheld with their quare is now upon the Horoscope. *Mars* who was Horoscopal at the posiventional Lunation at the last Conjunction, is now so posited in this Figure, and in opposition to *Saturn*, *Significat mala, injuriæ, rixæ, contentiones atque contrarietates inter divites, seu nobiles, atque magnates regionum quæ sunt in divisione signi in quo fuerit Mars; & divites atque magnates regionum prædictarum, insurgent enim in eos ex guerrâ, & nitentur contra eos, ut expellant eos de suis civitatibus atque regionibus, nec remanebit hoc per eos: & abscindent viæ inter eos, nec permittent res portari de regionibus illis ad illas. Etiam universitas civium in regionibus, quæ fuerint in divisione signi, in quo fuerit Mars, nitetur in læsione & offensione civium aliarum regionum prædictarum.*

It signifieth evils, injuries, brawlings, contentions and contrarieties between the rich, noble, or great men, who are in the division of the Sign wherein *Mars* is, and the rich and great men of the Country aforesaid (that is, that are under the Sign in which *Saturn* is) they shall rise against them in battel, and strive to expel them from their Cities and Countries; they shall block up the wayes between them, and hinder them from travelling from one Country to another. Also all those Cities and Countries under the division of the Sign wherein *Mars* is, shall endeavour to offend and hurt the other Cities aforesaid. *Haly* saith, men shall be at discord among themselves, and shall prosecute each other with hatred and malice, and shall cease from mutual and friendly visits, shall vilifie one another, and detract from each other what they can.

But that which is most considerable in this Revolution, and indeed in the whole year, is the Opposition of the two Superiours, celebrated the twenty fifth of *October*, about four in the afternoon, according to the Doctrine of *Astronomia Instaurata*. It happeneth in the Angles of this Revolution; but that which is more considerable is, that it is in a direct Quartile to their Conjunction, and will powerfully manifest their malign influence, and speedily too, of which, I fear, many Nations are already too sensible of. *In Oppositione duorum Superiorum strages fiunt*, saith *Rigel*: Upon an Opposition of the two superiour Planets, there happens slaughters of men or mankind. It signifieth also the ruine of many families, and decay of very antient foundations or buildings. *Bonatus* saith, that an Opposition of *Saturn* and *Jupiter* *significat quod evenient ad divites, sive magnates, qui sunt in divisione signi in quo fuerit Saturnus contentiones bellorum, ex ipsius regionibus quæ sunt in divisione signi in quo fuerit Iupiter, a regibus, sive magnatibus, seu divitibus earum regionum*, Part 4. Chap. 57. P. 551. That there shall happen to rich and noble men, who are under the division

of

of the Sign, wherein *Saturn* is, contentions, and the evils of war, from those Countries, and from the great and noble men, who are under the division of the Sign in which *Jupiter* shall be in. *Significat rixas, lites & contentiones inter homines*: And, saith *Haly*, that there will be many brawlings, strifes and contentions among men. It signifieth wars and divisions among the vulgar and inferiour sort of people, rebellions in many places, and many rich men impoverished, and many turned out of their Offices and places of trust. Many more quotations might here be inserted, of the same signification with the former.

The Sun is in Trine to *Saturn*, and in a friendly Aspect to *Jupiter*, which signifieth a moderate healing spirit among such persons signified by the Sun, *viz.* Kings Governours and eminent Grandees, who will be forward and willing to reconcile and compose differences.

Of the Winter Quarter.

THe Winter is called *Hyems*, *quia multi imbres*, because it brings wet slabby weather: We account it the last Quarter, others have accounted it the first, for this reason, *Quia tunc Sol ad nos ascendere incipit*, because the Sun then begins to ascend unto us. It taketh its beginning when the Sun entreth the Tropick of *Capricorn*, and maketh our shortest day and longest night, which happeneth this year on Munday the eleventh of *December*, at thirty seven minutes past four in the Evening. The seventh degree and thirty three minutes of *Pisces*, or the Fishes, mediates the Heaven: and ten degrees forty four minutes of *Cancer*, or the Crab, ascends our Eastern Finitor. *Mercury*, *Saturn* and *Mars* by their fortitudes in the Heliacal places

are

are conſtituted Rulers of this Quarter. *Mercury* is under the Earth and beams of the Sun: *Mars* is under the Earth in a watry Sign, and in Trine to the Horizon. *Saturn* from the mid heaven ejaculates his moiſt rayes thither. From whoſe influx we may expect a wet and ſlabby ſeaſon, which their Trine to each other doth confirm. But the *Sun* and *Jupiter* coming to behold each other with a Trine, at the latter end of the month, gives us cauſe to believe, that the year will end with ſome Froſts and ſerene weather.

Of Eclipſes this Year, 167[illegible].

THere happeneth this Year two total and almoſt central Eclipſes of the Moon: The firſt upon a Wedneſday, the fifteenth day of *March*: and the other upon *Friday*, the eighth of *September*; both near the Nodes or Interſections of her Orb with the Ecliptick. So that by that means there can be no Solar Eclipſes conſpicuous in any part of the known World.

The firſt of theſe Lunar Eclipſes happens on the day aforeſaid, at a little paſt eleven before noon. The defect will extend to the quantity of twenty digits, and viſible to our Antipodes; It will be viſible alſo in *Nova Guinea Inſulæ Salomonis*, *de los Tubarones*, in *Maredelzur*, in *Quivira*, Straights of *Anian*, *California*, *Chiay*, *China*, *Borneo*, *Japan*, *India extra Gangem*, in the *Philippine* and *Molucca* Iſlands, &c. but no more of this

The other will in part be viſible in the Horizon of *London*, and is a total and almoſt central Eclipſe.

Beginning

	H.	m.	S.
Beginning is at	4	51	29
Beginning of total darkneſs	5	50	31
Middle	6	40	56
True Oppoſition	6	41	59
End of total darkneſs	7	31	21
Full end	8	30	23
Total duration	3	38	54
Digits eclipſed.	20	09	19

The beginning of this Eclipſe cannot be ſeen in our Horizon, for the Moon riſeth not till nine minutes paſt ſix: She is in twenty five degrees and forty minutes of the Fiſhes. At the apparent time of the Eclipſe, or true Oppoſition, fifteen degrees and forty minutes of *Aries*, doth aſcend in our Horizon; and five degrees fifty nine minutes of *Capricorn* upon the mid heaven. *Saturn* ſhereth the eclipſed Luminary through the Skies, and beareth a part or proportion of the Government of the Eclipſe. *Mars* deſcends before the Sun below the Weſtern Horizon, is in oppoſition to *Saturn*, and principal Ruler, or Lord of the Eclipſe.

Conſideration ought to be had firſt to the Sign it ſelf, in which the Eclipſe happeneth, it is bicorporeal or double bodied. The Sign is of the watery Triplicity. An Eclipſe in *Piſces* ſignifieth harm to Vegetables, to ſuch Creatures that live in the water, or of the water; the corruption of Fountains, and waters made unwholſome thereby.

Proclus ſaith, That an Eclipſe in the laſt decanate or face of the Fiſhes, *Latrocinia, & rapinas terræ marique promiſcuas imitatur*, ſignifieth robberies and promiſcuous rapines both by Sea and Land. *Saturn* and *Mars* in Oppoſition do much heighten the effects of the Eclipſe, and intrude

intrude their own malign influx, of which I have briefly hinted in the Autumnal Quarter.

Thoſe places ſubject to the Signs of *Pisces*, *Virgo*, *Sagitarius*, and *Gemini*, will be moſt ſenſible of the effects: As *Portugal*, *Normendy*, part of the *Rhine*, *Sileſia* the Lower, *Spain*, *Dalmatia*, *Hungaria*, *Flanders*, *Brabant*, and the Dukedome of *Wittemburg*: And of Cities, *Wormes*, *Ratisbone*, *Lions*, *Paris*, *Baſill*, *Lovaine*, *Bruges* in *Flanders*. It moſtly concerns thoſe people, whoſe Aſcendant was the degree or oppoſite degree of the Eclipſe, and they ſhall more ſenſibly feel the pernicious effects: But I have already launched beyond my bounds.

His autem de rebus Apollo me admonuit, ut brevis eſſem.

Certain

Certain neceſſary rules for the adminiſtration of Phyſick, letting blood, &c.

THe powers of the body of man are threefold, Natural, vital, and Animal; the natural power is ſeated in the *Liver*, governed by *Jupiter*, aſſiſted by *Luna* and *Venus*; from this is bred the four humors, Blood, Choller, Phlegm, Melancholly. Blood is made of meat perfectly concocted, in quality hot and moiſt, and is under *Jupiter*. Choller is made of meat more then perfectly concocted, it is the ſpume or froath of the Blood, hot and dry, under *Mars*. Phlegm is made of meat not perfectly digeſted, it is cold and moiſt in quality under the *Moon* and *Venus*. Melancholly is the ſediment of the Blood, cold and dry in quality, govern'd by *Saturn*.

The Natural powers comprehend theſe four adminiſtring vertues, or faculties, *viz.* attractive, retentive, digeſtive, and expulſive. The attractive faculty is hot and dry under the influence of the *Sun* and *Mars*, fortified when the *Moon* paſſeth through *Aries*, *Leo*, *Sagittarius*. The retentive faculty is cold and dry under *Saturn*, ſtrengthned the Moon in *Taurus*, *Virgo*, *Capricornus*. The Digeſtive Faculty is under *Jupiter*, is hot and moiſt, ſtrenghned the *Moon* in *Gemini*, *Libra*, *Aquarius*. The expulſive is cold and moiſt under the *Moon*, aſſiſted by the *Moon*, in *Cancer*, *Scorpio*, *Piſces*. In ſtrengthening theſe faculties let the Moon be in one of theſe Signs, or let one of them aſcend.

The vitall power is ſeated in the heart, and is governed by the *Sun*, it is ſtrengthned by his medicines beſt, and is beſt done when the *Sun* is in *Aſpect* of the Fortunes, *viz.* *Jupiter* and *Venus*.

The Animal faculty hath its reſidence in the brain, and is divided into intellective and ſenſitive: the firſt is under the influence of *Mercury*, the other of the Moon, and are both aſſiſted by the benevolent rayes of *Jupiter* and *Venus*.

The

The moon in *Cancer*, ♃ purge Melancholly.
Scorpio, or *Piſces* ♀ purge Choller.
In *Sextile* or *Trine* to ☉♂ purge phlegme.

To prepare the humours let the Moon be in *Gemini*, *Libra*, *Aquarius*.

Take Cliſters, the Moon in *Aries*, *Libra*, *Scorpio*.

Take Vomits, the Moon in *Aries*, *Taurus*, *Capricorn*.

Take Gargariſmes, the Moon in *Aries*, *Cancer*.

Purge the head by Sneezing, the Moon in *Cancer*, *Leo*, *Virgo*.

Stop Rhumes, the Moon in *Taurus*, *Virgo*, *Capricornus*.

For Bathing, let the moon be in Signs contrary to the nature of the diſeaſe; Sweat two or three dayes after the change, or about the full moon, and let the moon be in *Aries*, *Leo*, or *Sagittarius*.

The ſeaſon for bleeding is at Spring or Fall.

Let young people blood from the Change to the firſt Quarter.

Bleed the middle ag'd from the firſt Quarter to the Full.

Elder age bleed from the Full to the laſt Quarter.

Old age bleed from the laſt Quarter to the Change.

Bleed the { Sanguine, Cholerick, Phlegmatick, Melancholly } the moon in { ♉ ♍ ♑ / ♋ or ♓ / ♎ or ♐ / ♏ or ♒ }

It is better if the moon be in ☌, ✶ or △ with the Fortunes, or the Planets in like Aſpect one with the other. The ☽ in ill aſpect with the Infortunes, or the Infortunes ſo configured, forbid Phlebotomy. Let not the moon be in ♊ or ♌. Obſerve theſe Rules unleſs in the *Pluriſie*, *Frenſie*, *Squinancy*, or *Apoplexy*, where *Phlebotomy* ought not to be neglected nor delayed.

Amerſham, in the County of *Buckingham*,
Auguſt 28. 1670. FINIS.
